Folks, here are some photos of the completed Greenway site I mentioned in our meeting last Wednesday (I like pictures!). This work remediated metals and PCBs down to about OLW under a ROD with DEQ and an approved permit and mitigation plan with NMFS and ODFW. As you can see, the bankline was totally revegetated with park space and a bike trail is above top of bank. Probably not a lot of this kind of opportunity in the Harbor given the industrial nature of that area, but it's a pretty impressive project that the City pulled off in conjunction with the condo owners upland.

The "datum rock" is used as a method to evaluate scour and cap accretion.

Thanks for coming and participating in the DT meeting, I look forward to the next steps!
